NICOTINE SCREENING TEST

CLINICAL PATHOLOGY

URINE COTNINE TEST: - 116.5<200ng/ml

NEGATIVE

Immunochromatographic assay for Qualitative Detection of Cotinine in urine. A positive result indicates only that the presence of cotinine is above the cutoff concentration. It doesn't indicate or measure level of consumption. It is possible that technical or procedural errors as well as other interfering substances in the urine specimen may cause erroneous results.

Interpretation of result:

Negative- Urine cotinine level below 200ng/ml
Positive- Urine cotinine level above 200ng/ml
